

40, 65 & 95 Gallon Capacity

Blow-Molded 3100 Series

Tough and Built for Efficient, Semi-Automated Route Service

The Blow-Molded 3100 Series Waste Kart from Ameri-Kart is strong, durable, and designed for use with semi-automated waste collection systems. The 3100 Series Kart is available in several sizes to match the needs of a full range of customers. Molded of fully recyclable materials, containers are ideal for large volume, contract handling of residential, commercial, and industrial waste.

BENEFITS:

- Design elements fit all semi-automated systems
- Cost-effective full-truckload shipping

Options and features to handle tough, hard work economically

ANSI compliance: Roll-A-Waste 3100 Series carts meet all American National Standards Institute (ANSI) Z245.30 and Z245.60 requirements for safety and lifter system compatibility.

Ameri-Kart's 3100 Series carts are blow-molded of high molecular weight-high density polyethylene (HMW-HDPE) for strength and durability. A two-step blending process assures complete, even distribution of colorants and UV inhibitors for consistent appearance and performance. Blow molding insures that walls, corners, and features are formed with a high strength to weight ratio.
